

Zeagle Product Specifications

Bouyancy Compensators:

Concept II BC

Concept II BC:
7309RK

The Concept II Buoyancy System breaks new ground when it comes to versatility, comfort, and custom sizing options. Zeagle's Patented PFS II System makes it possible for the Concept II to be configured for many different types of diving and many different divers. The modular design of the Concept II allows your Zeagle dealer to custom build a system exactly sized to fit your body and exactly suited to your needs. The US Navy uses the Concept II system to carry advanced rebreathers that need to be quickly and easily sized for different divers.

The Concept II Pro features a Ripcord weight system, twin rear trim weight pouches, lumbar pad, and a 44 lb capacity pleated hand sewn double layer bladder assembly with an internal elastic retractor. The Concept II Pro is ideal for the diver who wants a rugged and versatile buoyancy system with a Ripcord weight release, but does not plan to use twin tanks. Your Zeagle dealer can help you to select the options that are right for your particular style of diving.

Concept II Standard Features *
